The Necessary to Install Antivirus Apps on Kindle Fire

Can you get a virus on your kindle fire? Generally, if you don't do some hidden dangerous actions include side load or install apps/browsers/extensions from unknown sources, jailbreak device, browse the distrustful web pages or open dubious attachments from email, your Kindle Fire will not be attacked by viruses or malware. But be practical and realistic, only use the official provided functions or APPs is far from meeting our needs. At least for me, sometimes I must install some third-party apps or do some changes for my Kindle Fire. Or when I surf the internet on Kindle Fire, there is a big possibility to open an unsafe web page. So there is necessary to install an antivirus app to give your Kindle Fire a complete security.

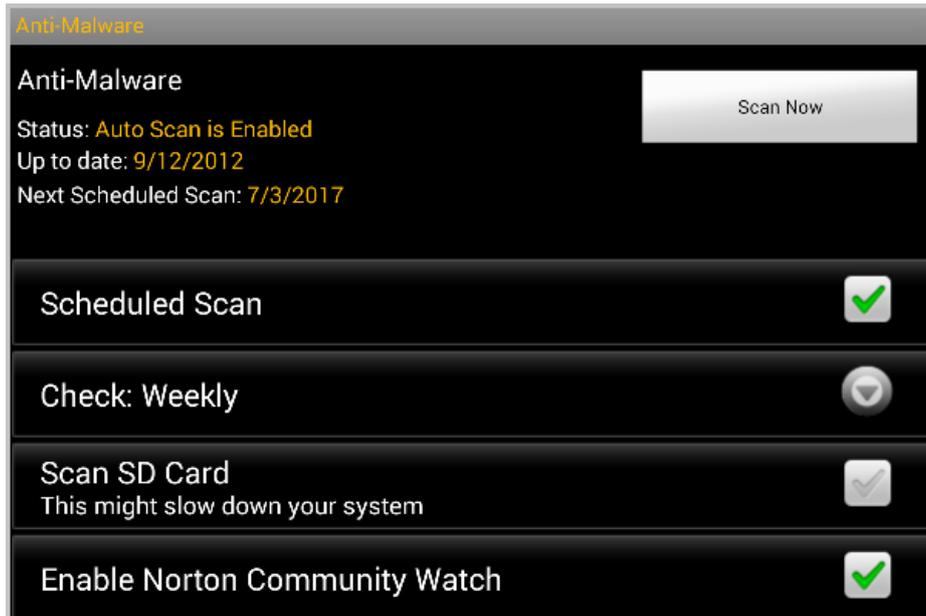

Dr.Web Antivirus Light

The Dr.Web Antivirus Light version is the basic protection from viruses and it is free. It is designed by Dr.Web LTD which is the anti-virus pioneer in Russia. It keeps updating the virus reservoir to protect your device. When you install new applications on Kindle Fire, it will automatically scan them. Quick scan, full scan, and custom scan are provided for you. The fewer files stored in the Kindle Fire, the shorter the scan time spent. When the malicious objects are detected, you will find them in the quarantine zone. You can also use it to scan specific files or folders and look over the statistics of detected threats and performed actions.
