1. Web Browser

Web browsers like Google Chrome, New Edge, Firefox, and Safari all have integrated PDF readers. Therefore, reading PDF files on your web browser is the most effortless method. All you have to do is drag and drop your pdf file to your browser or right-click on the PDF file and select open with your browser. It is true that viewing PDF with your browser is hassle-free and saves you lots of system resources, but it lacks many features.

The screenshot shows a Jupyter Notebook interface. At the top, the title bar reads "Python for Data Analysis" and "96 / 470". Below the title bar, there is a text cell containing the following text: "convention of always using `import numpy as np`. You are, of course, welcome to put `from numpy import *` in your code to avoid having to write `np.`, but I would caution you against making a habit of this."

Below the text cell is a code cell with the following content:

```
In [8]: data
Out[8]:
array([[ 0.9526, -0.246 , -0.8856],
       [ 0.5639,  0.2379,  0.9104]])

In [9]: data * 10
Out[9]:
array([[ 9.5256, -2.4601, -8.8565],
       [ 5.6385,  2.3794,  9.104 ]])

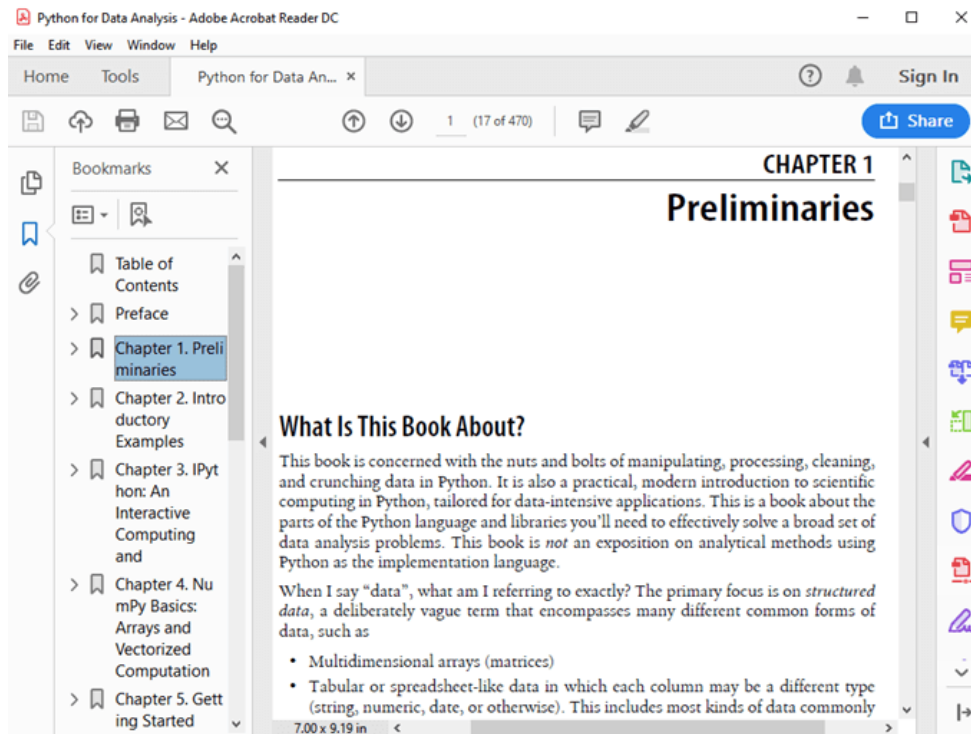

In [10]: data + data

Figure 2-4. Total births by sex and year

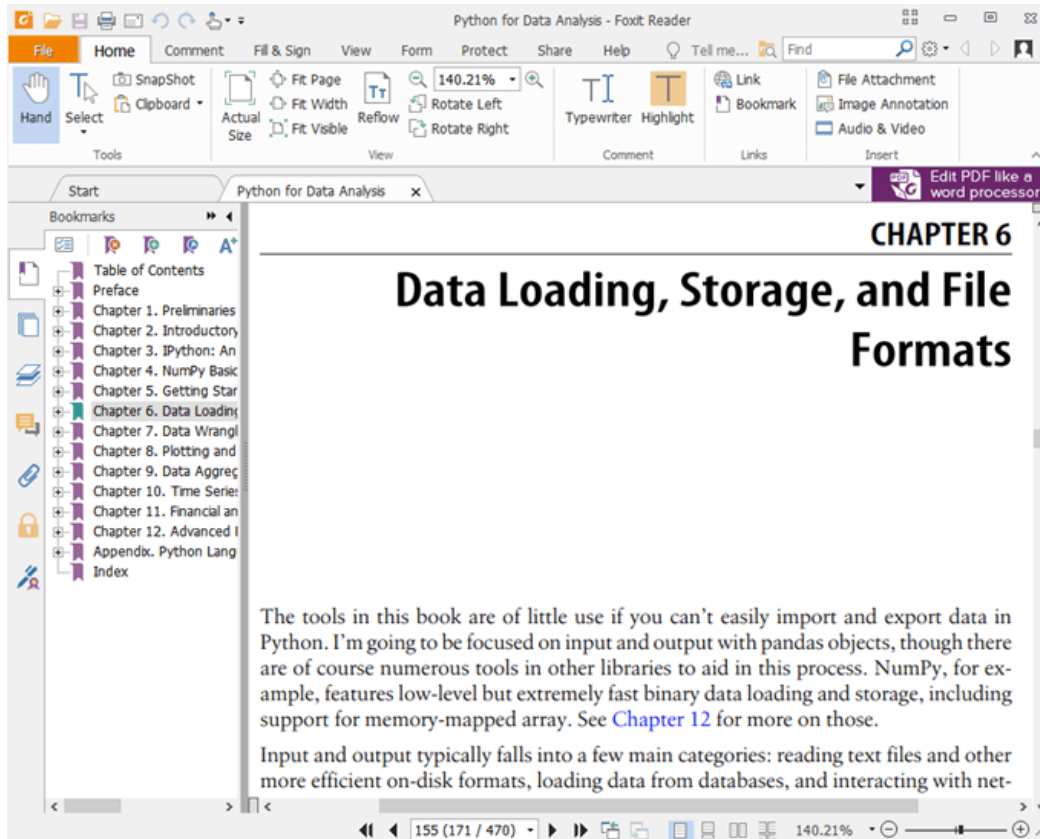

Remember that because `births` is of integer type, we have to cast either the numerator or denominator to floating point to compute a fraction (unless you are using Python 3!).

The resulting complete data set now has the following columns:

```
In [378]: names
Out[378]:
<class 'pandas.core.frame.DataFrame'>
Int64Index: 1690784 entries, 0 to 1690783
Data columns:
name      1690784  non-null values
sex       1690784  non-null values
births    1690784  non-null values
year      1690784  non-null values
prop      1690784  non-null values
dtypes: float64(1), int64(2), object(2)
